

THE RABBIT DIED -

Anybody know anyone walking around with a temperature of 95 degrees?

Virus is real and it kills; especially in depleted immune systems. This is not to say the US is not under assault - it is.
The criminal FILTH will likely strike with a more vicious attack ...

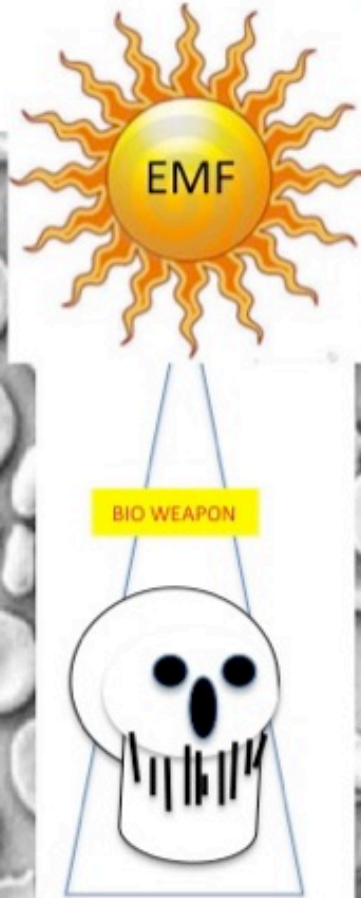

These are red blood cells

33°C= 91.4°F 33°

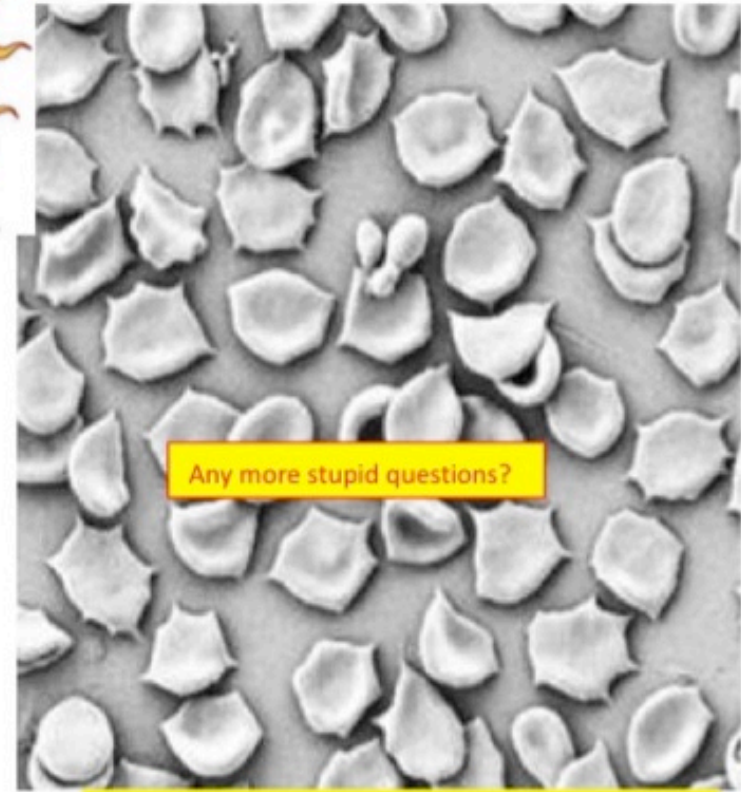

These are red blood cells

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5589725/>

These are coronas

35°C= 95°F 37°

Any more stupid questions?

Zero Days - Wikipedia https://en.wikipedia.org/wiki/Zero_Days

Under Our Skin - YouTube https://www.youtube.com/watch?v=2JgR_jfbhv8

The first question is: WHY? Is the blood cooled to 95 degrees? Why not display the same blood at 98.6? What did the spikes look like before the blood was cooled?

Anybody think the metal in the blood; iron, copper as examples, is slamming into the interior walls in capillaries, veins, arteries once it becomes magnetized? How 'bout when the frequency begins pulsing and jamming white blood cells to cause asphyxiation?
